

Laura Easterbrook

Laura is a Senior Associate in the Ofwat Environment Team and has been at Ofwat for 3 and a half years. Climate change and the natural environment are two areas that she is passionate about and so working in this team within the water sector is extremely rewarding. Laura works on a variety of environment-related policy areas in her current role, including nature based solutions, environmental reporting and climate change (both mitigation and adaptation).

Laura joined Ofwat on the Graduate Programme in 2017 and during that programme she worked in a number of teams within Ofwat, gaining a range of valuable skills and experiences throughout. Laura graduated from the University of Exeter in 2016 having studied Geography there for 3 years. Throughout her degree Laura focused on climate change, culminating in her final year dissertation which focused on the impacts of climate change on the Greenland ice sheet.
